

Arco Capture

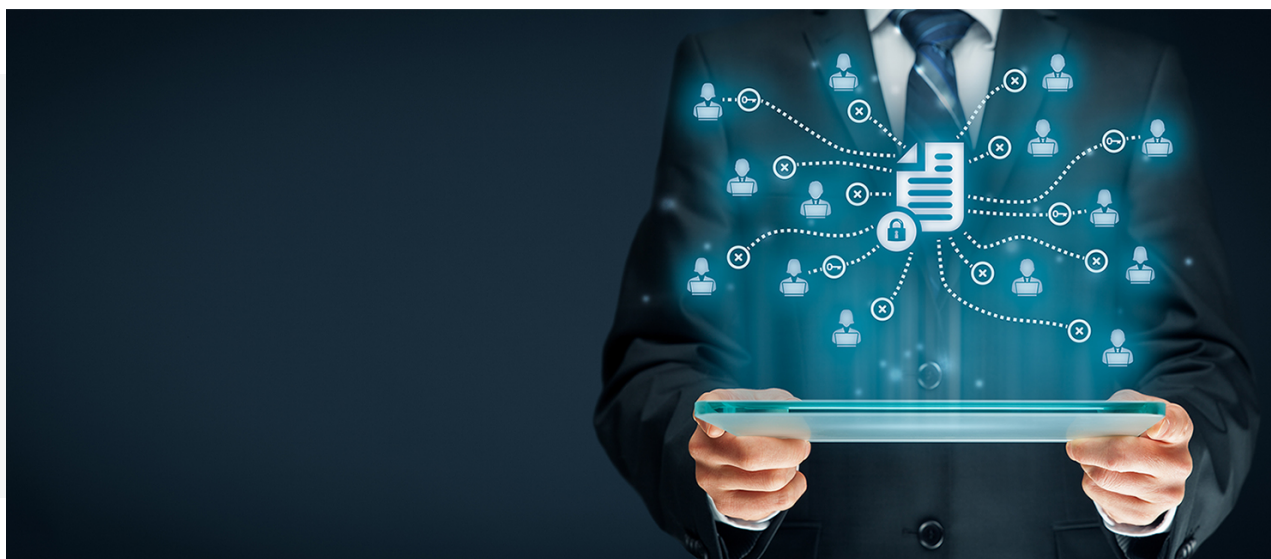

Arco Docflow

“ArcoInfo completed the conversions flawlessly... the results saved the customer over \$500,000 and the relationship with my client stronger than ever”

Saving hospitals money with legacy data conversion

Situation

Merger & Acquisitions have been reshaping the healthcare landscape and many healthcare organizations are switching their legacy data systems to another vendor in order to improve the organization's performance, the quality of care and reduce costs. The problem is that these healthcare systems still need to access their history patient data and be able to search, extract and retrieve the information in the current format, while the healthcare organization continues to operate.

Solution

ArcoInfo answers this challenge with its Enterprise Content Management solution ArcoDOCFlow that offers support for a variety of legacy data formats such as Meditech, McKesson, MedRec, Omnicell, Presidio, Imagine, Novarad, Exchange (2007, 2010 and 2013), SunQuest and more., thereby providing businesses with a future-proof solution.

Benefits

- ✓ Simple Document and Data Search & Retrieval
- ✓ Capable of High Volume Processing
- ✓ Seamless Integration with existing ERP and CRM
- ✓ Secure and Legally Compliant

Highlights

- ✓ Multi-channel friendly
- ✓ Industry and Software agnostic
- ✓ Flexible, scalable and customizable
- ✓ Future proof technology
